

TANVIK SRI RAM REDDY

Coimbatore, Tamil Nadu | +91-9000246705 | tanviksriram@gmail.com | LinkedIn | Github | Portfolio

Education

Karunya Institute of Technology and Sciences

Jul 2023 – May 2027

B.Tech, Computer Science and Engineering | CGPA: 8.98/10

Aditya Junior College – Intermediate, 81.6%

May 2021 – Jan 2023

Projects

Nura | Modular Productivity & Focus Platform

Oct 2025 – Present

React.js, Electron, Express.js, MongoDB, FastAPI, JWT

- Architected a cross-platform productivity system (web and Electron desktop) with a layered Express backend – routes, controllers, services, models – spanning 11 route modules, and a React frontend organized around contexts, custom hooks, and feature-based modules.
- Engineered a focus-session engine around a finite state machine (Idle, Running, Paused, Transition, Ready, Finished) driving a pure-JavaScript timer engine decoupled from React, using requestAnimationFrame for precise elapsed-time tracking with pause/resume and crash recovery.
- Designed and implemented 50+ RESTful API endpoints across authentication, task/goal management, and session workflows, secured with JWT authentication, role-based access control, OTP email verification, and dedicated validation and admin middleware.
- Implemented a debounced autosave system with a dirty-queue and batched backend synchronization to prevent data loss, feeding a rule-based analytics layer that computes productivity scores, focus/break trends, and completion-rate KPIs.

ResQit | Emergency Disaster Response Management System

Aug 2024 – Oct 2024

Java, JavaFX, JDBC, PostgreSQL

- Architected a role-based coordination system for disaster response, separating workflows and data access across administrators, volunteers, and citizens.
- Connected a JavaFX desktop client to PostgreSQL via JDBC, scoping every query to the requesting user's role to enforce access control at the data layer.

AquaTrack | Personal Water Intake & Hydration Tracker

Mar 2023 – Apr 2023

Python, PostgreSQL, CustomTkinter

- Designed a PostgreSQL schema to track daily water intake and support historical trend analysis over time.
- Built a CustomTkinter desktop client with user authentication and a low-friction daily-logging flow.

Internship Experience

CodTech IT Solutions

Aug 2024 – Sep 2024

Python Developer Intern

- Developed Python applications end-to-end under senior engineer guidance, implementing core functionality and applying object-oriented design and testing practices across multiple assignments.

Technical Skills

Languages: Java, Python, JavaScript, Kotlin

Frontend: React.js, HTML, CSS, Tailwind CSS

Backend: Node.js, Express.js, FastAPI, Java Swing

Databases: MongoDB, PostgreSQL, SQL

Architecture & Concepts: REST APIs, JWT Authentication, Role-Based Access Control, Middleware, Layered (MVC)

Architecture, Finite State Machines, Session Management

Tools & Platforms: Git, GitHub, Linux, Docker, Electron

Leadership & Achievements

Smart India Hackathon (SIH) 2025

2025

Team Leader – College-Level Finalist

- Led a multidisciplinary team from ideation to prototype development, reaching the college-level finalist round.

G-K Hackathon – Digital Campus 2.0 (Google Cloud #HackSprint)

2025

Team Leader

- Coordinated a six-member team across planning, development, task allocation, and the final project presentation.

Intel Unnati Industrial Training Program

Mar 2025 – Apr 2025

Project Team Lead

- Led a team through the full development cycle of a retail analytics project, coordinating planning, task delegation, and technical delivery.

Certifications

- MERN Full Stack Development – Cisco ThingQbator
- JavaScript Essentials 2 – Cisco Networking Academy

- Java Programming Fundamentals – Infosys Springboard
- Python Programming (AD141 - RHA) – Red Hat

Additional Information

Languages: English, Telugu

Interests: Building full-stack applications, solving DSA problems, exploring AI, and reading books.
